

Smoothie box

Problem description

When a customer hits the button “Customize” on a box page of a box that is currently not available, he will be forwarded to the box building page with all the content of the box offered. On the box building page he will be able to save the box (which is supposed to be unavailable). A saved box can later be ordered by the customer. So the problem is that a customer can configure, save and order boxes that are currently not available.

ToDo

Simply disable the button “Customize” for boxes that are currently not available. This will be the same functionality that is already in place for the button “Add to cart” = “In den Warenkorb legen”
